

Pacemaker Prescription

Once you know, your patient needs a device (ILR, pacemaker, CRT-P/D, ICD, box changes and lead reposition), you need to:

- Add to ACS list
- Complete a pacemaker prescription form, you can find this through *g drive, cardio, devices prescription form*.
- Send the prescription form to plh-tr.cathlabreferrals@nhs.net
- EPMA prescription for eradication therapy: *you can find this if you search MRSA eradication therapy through order sets*. Also, they will need teicoplanin prescription, 400mg IV stat prior to insertion of device (teicoplanin not necessary for ILR though).
- Any size cannula, preferably left arm.
- Post procedure: read the green procedure booklet in the nursing folder, it will have the management plan and should specify whether the patient needs a post procedure CXR.
